Companies Supported

Across 3 continents

30+

Years Collective Expertise

Engineering & consulting

Suvrin Technologies is a global technology consulting firm helping businesses design, build, and deploy custom software, enterprise ERP systems, and AI-powered solutions. We match the right technology to the actual business problem — not whatever's currently trending.

Our team of engineers, ERP consultants, AI specialists, and project managers bring decades of combined experience across manufacturing, healthcare, logistics, finance, and professional services — delivered by one accountable team from strategy through go-live.

What We Do

Six practice areas, one accountable delivery team

01

Custom Software & Applications

Web, mobile & cross-platform applications built for your exact requirements

02

Enterprise Applications — ERP & CRM

Full-cycle ERP implementation and CRM consulting, done right the first time

03

Digital Transformation

Strategy, roadmap & IT consulting for organizations modernizing their operations

04

Software Engineering

Bespoke systems, IoT, DevOps, legacy modernisation & API integration

05

AI & Intelligent Automation

Practical AI integration where it demonstrably improves a business outcome

Custom Software & Application Development

Web, mobile & cross-platform applications built for your exact requirements

1

Mobile App Development

Define goals and target audience for focused measurable campaigns

2

Web Application Development

React, Angular, Vue & Next.js. SSR/SSG architecture built for Core Web Vitals and SEO from day one.

3

Cross-Platform Development

One codebase spanning iOS, Android & web — shared business logic, native performance where it matters.

4

Progressive Web Apps (PWA)

App-like functionality — offline access, push notifications, home-screen install — without the App Store cycle.

5

CMS-Based Web Development

WordPress, Strapi & Contentful for content-driven sites where publishing speed matters more than custom logic.

6

Full-Stack Delivery

Every application paired with the right backend — Node.js, Python, or Java — and cloud deployment, end to end.

Digital Transformation

Web, mobile & cross-platform applications built for your exact requirements

01

Strategy & Roadmap

Potential threats related to revenue streams, rising expenses, unstable funding, or sudden financial shocks

02

IT Consulting

Independent technology assessment, vendor selection & architecture review. No vendor commissions or reseller incentives clouding the recommendation.

03

Digital Sovereignty

Data localisation & compliance strategy for organizations operating across India and the Middle East, plus vendor-independent architecture to reduce lock-in.

Software Engineering

The systems that run your business — not just the apps that launch it

1

Custom Software Development

Bespoke systems built to your exact operational requirements when off-the-shelf software doesn't fit.

2

IoT Development

Connected device platforms & edge computing for manufacturing, logistics & industrial operations.

3

DevOps Services

CI/CD pipelines, infrastructure automation & cloud operations that keep systems shipping reliably.

4

Legacy Modernisation

Re-architect, re-platform, or rebuild — whichever actually fits the risk and budget, not the biggest sale.

5

API Integration

Custom integration layers connecting systems that were never designed to talk to each other.

6

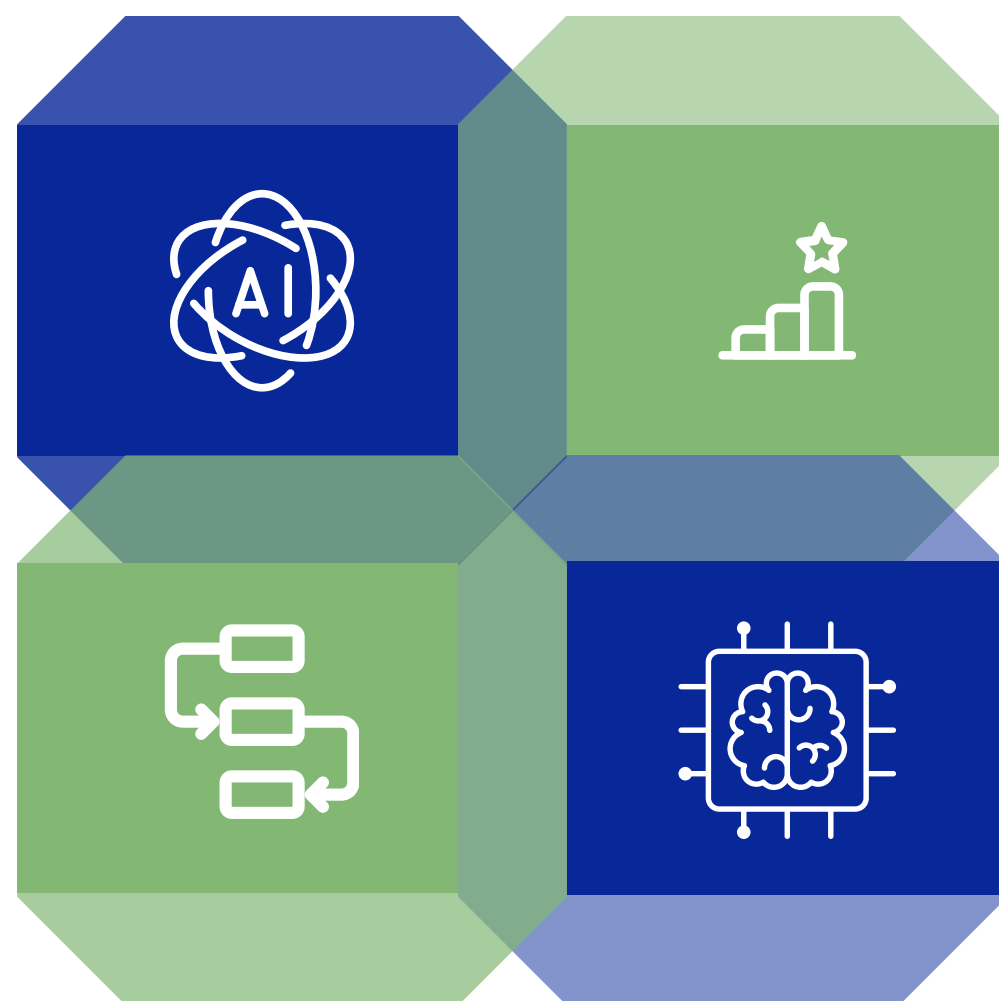

AI-Powered Robotic Integration

Software layers connecting AI decision-making to physical automation in warehouses & manufacturing.

AI & Intelligent Automation

Practical AI, integrated where it demonstrably improves an outcome

01

Document & data-heavy workflows

Extraction, classification & summarization at scale

02

Customer-facing knowledge retrieval

RAG-backed search and support over your own data

03

Operational decision support

Agents that act on live business data, not static reports

04

Operational decision support

Agents that act on live business data, not static reports

Support Services

Ongoing technology support with predictable costs and responsive SLAs

1

Product Development

End-to-end product delivery from concept through launch — a consistent team, not a new vendor at every stage.

2

UI/UX Design

User research, wireframing, prototyping & design systems — built on real usage patterns, not a mood board.

3

QA & Testing

Manual, automated, performance & security testing — structured coverage, not informal spot-checks.

4

IT Infrastructure

Cloud, networking & server management — proactively maintained, not configured once and left alone.

5

Maintenance & Support

Bug fixes, updates & feature enhancements with defined SLAs — predictable cost, not open-ended billing.

6

Ongoing Partnership

A single accountable team for the life of the system — from go-live through every iteration after.

How We Work

The same discipline, applied to whichever problem you actually have

Discover

Understand the actual business problem before recommending a technology or platform.

Strategize

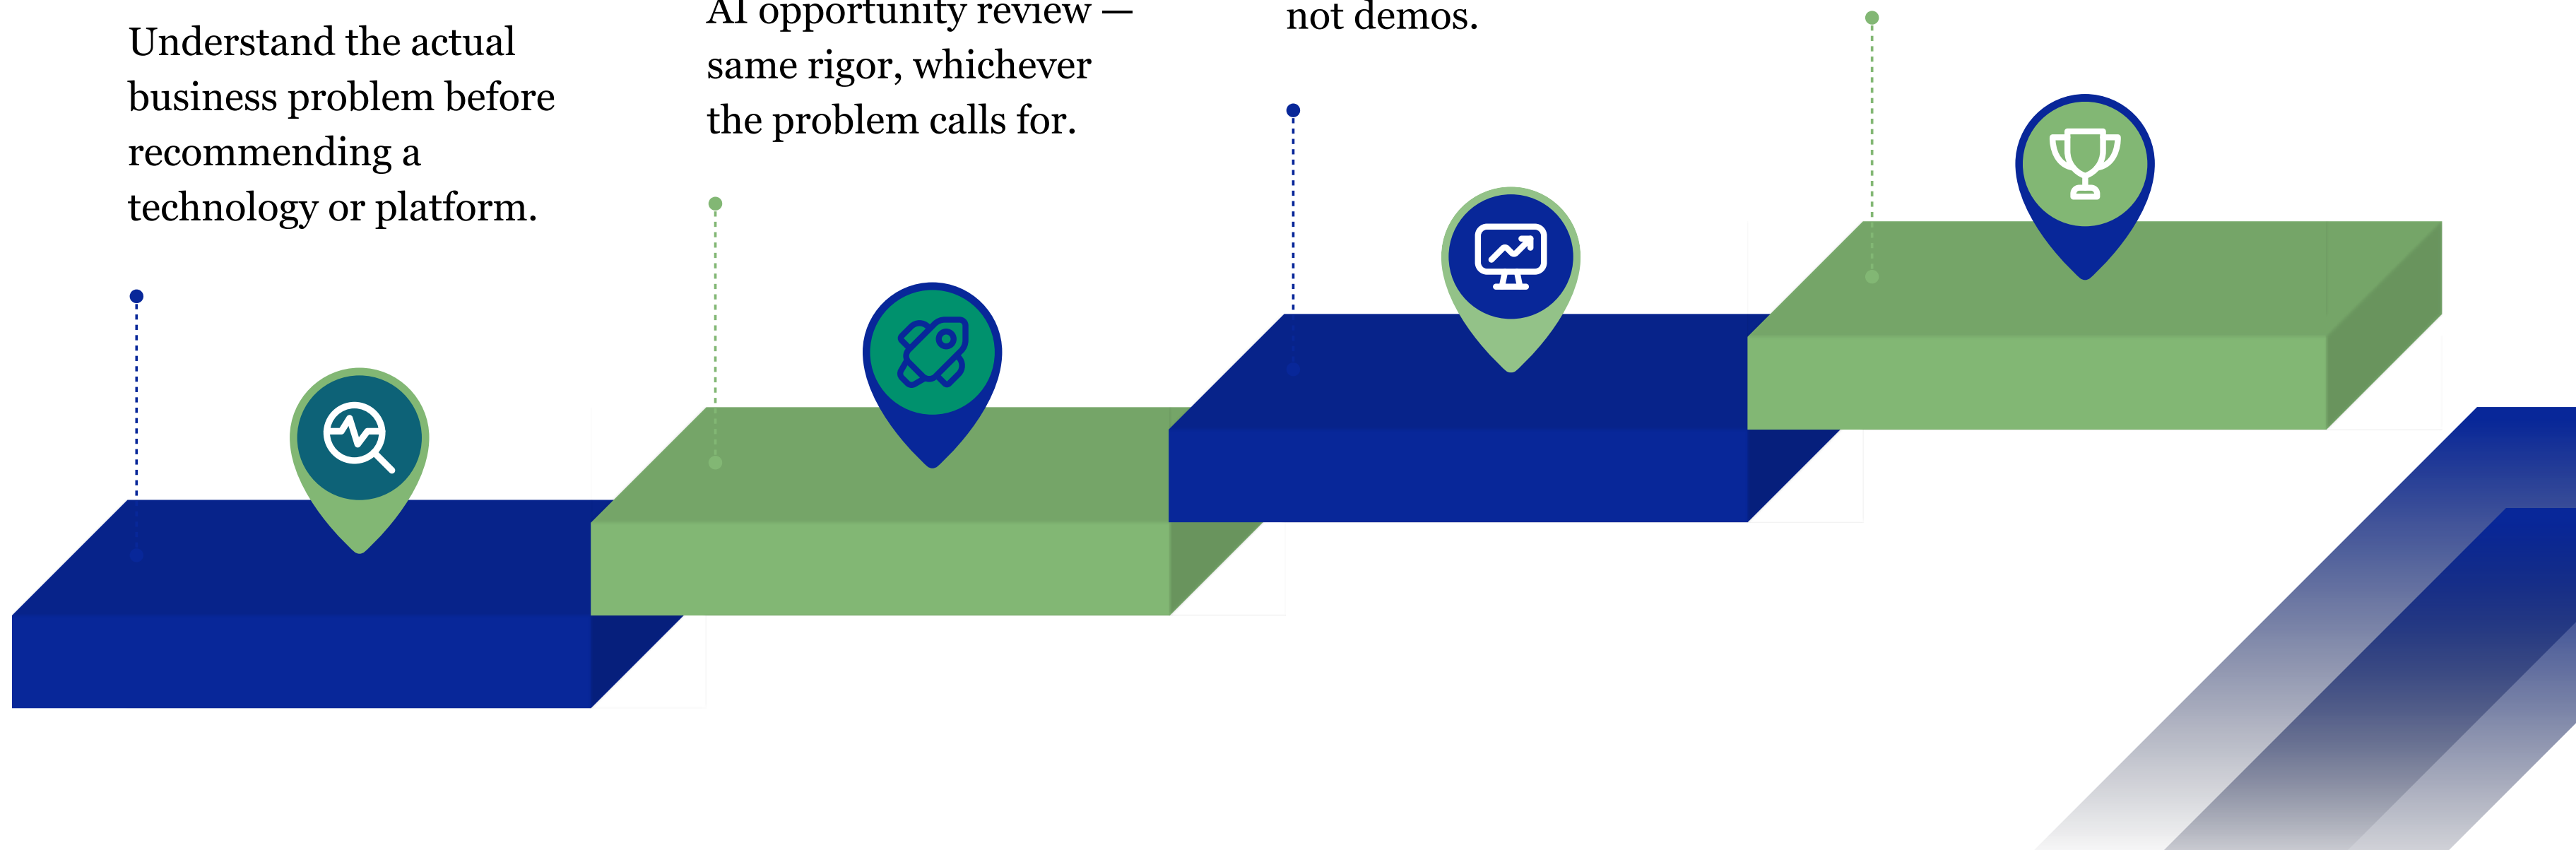

ERP assessment, application scoping, or AI opportunity review — same rigor, whichever the problem calls for.

Build

Production-grade systems from engineers, ERP consultants & AI specialists — not demos.

Launch & Grow

Support adoption, measure the outcomes from the original business case, and keep improving after go-live.

Enterprise Applications

Our deepest practice area — ERP & CRM implementation done right. Full-cycle implementation, customisation, and support — requirements through go-live. Most of the value comes from customisation most implementers skip.

01

CRM Consulting

Vendor-neutral platform selection based on your actual sales process, not commission structure.

02

Staff Augmentation

Experienced Odoo, CRM & software engineers embedded with your team on demand.

03

Odoo ERP

Odoo is our core ERP platform — full-cycle implementation from requirements gathering through go-live, plus the custom module development most implementations actually need once you're past the standard feature set.

Our Values

Built on delivery. Grown on trust.

01

Delivery Over Promises

We judge ourselves by what we ship, not what we say.

02

Client-First Thinking

Your business outcomes are our north star.

03

Technical Excellence

The highest engineering standard, across every platform we work in.

04

Transparency

No surprises, no hidden costs, no silent scope creep.

05

Long-Term Partnership

We invest in your business so we can grow with you, year after year.
